PROFESSIONAL SUMMARY

Systems Analyst with hands-on experience in requirements, integrations, and production support of enterprise systems. I combine systems analysis with production operations: formalize requirements, model processes, analyze integrations and incidents, test APIs, and prepare reproducible technical context for development teams. Core stack: REST APIs, Postman, Python, pytest, FastAPI, Docker, Git, Linux; I use SQL and relational databases for data validation and analysis. English - B2.

KEY SKILLS

Systems Analysis: requirements, AS-IS / TO-BE, BPMN, UML, PlantUML, system scenarios, technical documentation
Data & Integrations: SQL, PostgreSQL, MariaDB, Microsoft SQL Server, SQLite, REST APIs, Postman, data structures and mapping
Testing & Operations: Python, pytest, FastAPI, Docker, Git, Linux, log analysis, incident diagnostics, L3 support

EXPERIENCE

VIM Investments JSC

07.2026 - Present

Analyst Intern, Business Application Support | *financial sector, L3 support*

- Automated recurring regression API checks using Python/pytest for FastAPI services. Impact: reduced manual retesting, accelerated change verification, and lowered the risk of missed regressions.
- Shortened the initial incident diagnosis cycle by reproducing scenarios, correlating APIs, logs, and data, and identifying the failing layer before handoff to developers. Impact: fewer clarification cycles and faster transition to remediation.
- Standardized technical context for defects - reproduction steps, input data, expected/actual results, and validation findings. Impact: developers reproduce issues faster, while similar incidents can be handled without restarting analysis from scratch.

T1

02.2026 - 05.2026

Systems Analyst Intern | *systems integration and software development*

- Formalized functional and technical requirements and modeled AS-IS / TO-BE processes in BPMN. Impact: clearer specifications and lower risk of tasks being returned for additional clarification.
- Designed data structures and mappings, validated data with SQL queries, and analyzed REST APIs in Postman. Impact: inconsistencies between requirements, data, and integrations were identified before moving solutions further in the delivery process.

RTK Data Center

03.2025 - 02.2026

Duty Engineer | *data center*

- Monitored and performed initial diagnostics of server and network infrastructure, coordinated incident resolution, documented system state across shifts, and participated in preventive maintenance. Impact: faster escalation, lower risk of prolonged downtime, and fewer recurring failures.

EDUCATION & PROJECTS

Financial University under the Government of the Russian Federation - Applied Mathematics and Computer Science, 2026

Thesis: Attention Meta-Learner for MOEX Si Futures - 219,529 minute OHLCV bars, 29 features, multiple ML models, time-based validation, and Streamlit.

Additional: Yandex Practicum - Frontend Development (2025); Cambridge B2 First (FCE), 2021.

About: many years of advanced alpine skiing and extensive swimming experience. Sport has developed discipline, focus, and a consistent results-oriented mindset.
